

ameise artwork how-to

getting your graphix ready for printing at amei.se shouldn't be too complicated (hopefully).

This page will show you the basic layout dimensions and specs. feel free to ask if you have some more questions:

mail to: amei.se@amei.se or call: +49 40 22618012

you are free to use any program you want

we have templates for adobe software, but you can use GIMP or inkscape as well...

basics:

files need to be in **CMYK mode**, and should have minimum **300dpi** resolution

(if you know how to deal with colour profiles please use ISO coated v2 300% / FORGRA 39)

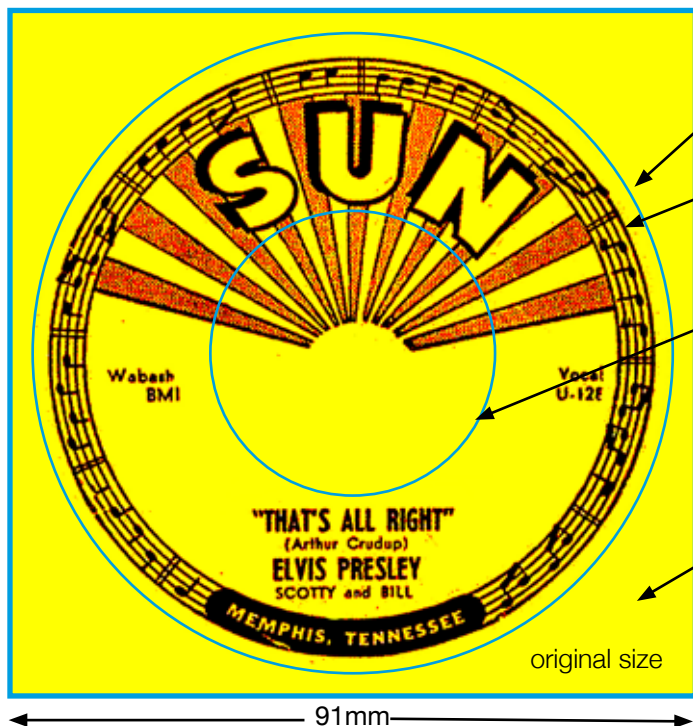

we can work with **TIF or PDF** files (we supply .psd, .ai and .indd templates, but we want you to save it in a closed format)

make sure that you convert all **layers to one**

make sure to **embed fonts**

please use the **exact dimensions**, no extra bleed, marks, or infospace needed...

one file per side

labels:

dataformat: 91x91mm

endformat: 85mm Ø

big hole: 38mm Ø

small hole: 7.3 mm Ø

please don't put any circles in your design the blue lines are just for your info...

sleeves

(135gsm, folded and glued):

endformat: 180mm x 180mm

dataformat: **192mm x 372mm**

that is 6mm bleed

covers

(280gsm, folded and glued):

endformat: 185mm x 185mm

dataformat: **382mm x 197mm**

that is 6mm bleed

folders (new size!)

(300-350gsm, folded, printed on both sides):

endformat: 181mm x 181mm (fits into plastic bag)

dataformat: **366mm x 185mm**

that is 2mm bleed

we need two files: inside and outside...

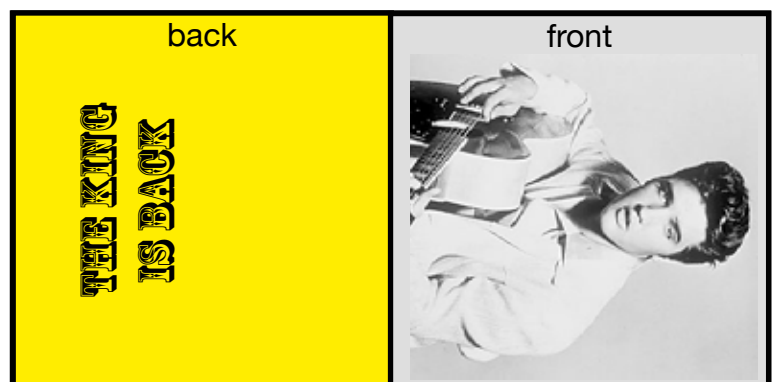

covers, sleeves, folders:

put both sides in one file, like below...

if you want the cover to open at the top, you need

to turn the pages: 90° counterclockwise on the left,

90° clockwise on the right...otherwise just leave it upright

any special needs (screenprint, gold, silver)

please ask!

happy drawing!
